

Analyzing a real Phishing Website

1. Find a Phishing site

I'm using PhishTank to get recently found phishing sites

PhishTank is operated by [Cisco Talos Intelligence Group](#) (Talos). Learn more about [PhishTank](#) or [Talos](#).

The selected website looks similar to the site of Proton VPN

2. Lets open this link

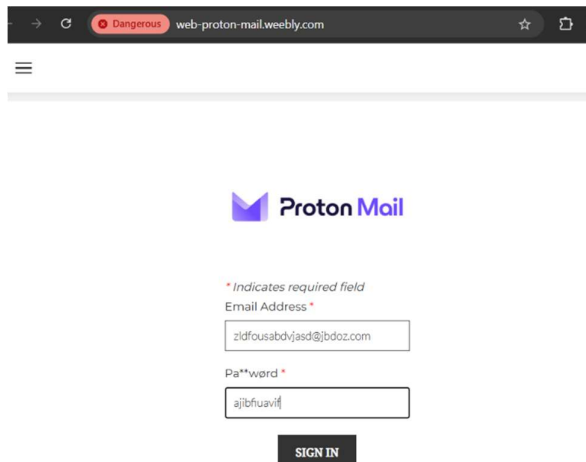

FAKE

REAL

Now a days browsers are secure and smart they can detect if you're being redirected to a real website or a fake one, but still the browser can make a mistake so double check any website link or email

3. Fill garbage information (on phishing site)

As soon as I clicked on "sign in" button it redirected me to real website and previously filled information is sent to the Admin of phishing site.

A normal person would think that maybe his internet is broken and that's why site didn't open.
